Preface by <i>Michael E. McClain</i>	iii
Contributors	vii
CHAPTER 1: Processing of Bioactive Elements in the Amazon River System <i>by Emilio Mayorga & Anthony Aufdenkampe</i>	1
Geographical and historical perspectives of the Amazon	2
The Amazon River and its basin	2
History of geochemical research in the Amazon	3
Role of size on fate and transport.....	5
Three distinct physical size classes of material transported in rivers.....	5
Coarse particles.....	5
Fine particles.....	9
Dissolved matter	10
River metabolism.....	12
Variability and scale in the river system	13
Importance of natural variability and river scale for biogeochemical processing	13
Regional heterogeneity, downstream evolution, and large-scale structure	14
Temporal variability and episodic disturbance	16
Conclusions.....	19
References.....	20
CHAPTER 2: Organic Matter Size Dynamics in the Amazon River <i>by Stéphane Mounier, Marc Benedetti, Jean Yves Benaïm & Jacques Boulègue</i>	25
Experiments and results	26
New insights on Amazon discharge chemistry	27
Carbon fluxes.....	27
Metal ions and carbon.....	28
Carbon size dynamics	29
Understanding size speciation variation	30
Estimation of carbon fluxes to the estuary.....	33
Conclusions.....	33
References.....	34
CHAPTER 3: Nitrogen Dynamics on the Amazon Flood Plain in Relation to the Flood Pulse of the Solimões River <i>by Jürgen Kern, Heidi Kreibich & Assad Darwich</i>	35
Hydrochemistry of the Solimões River and Lake Camaleão	36
Seasonal nitrogen processes in flooded and exposed sediments.....	39
Role of N ₂ fixation for the Amazon flood plain.....	43
Land-use strategies on the Amazon flood plain	45
References.....	45
CHAPTER 4: Total Mercury Distribution and Importance of the Biomagnification Process in Rivers of the Bolivian Amazon <i>by Laurence Maurice-Bourgoin & Irma Quiroga</i>	49
Description of the study area.....	51
Concentrations and distribution of mercury species in surface waters	51

Methodology	52
Total Hg distribution in rivers of the Bolivian Amazon	53
Partitioning of Hg between dissolved and particulate fractions in surface waters	54
Biomagnification and bioaccumulation of Hg in fish	55
Methodology	55
Results of total Hg and methyl Hg in fish of the Beni, Tuichi and Quiquibey rivers	56
Bioavailability and bioconcentration	56
Biomagnification in the aquatic food chain: basic concepts and <i>in situ</i> evaluations. Application to the Bolivian Amazon basin	59
Consequences in riparian populations	61
Methodology	61
Mercury concentrations in miners	62
Mercury concentrations in indigenous communities	62
Importance of the diet in the human exposure to mercury	63
Conclusions	63
References	65
Abbreviations and definitions	67
CHAPTER 5: Hydro-ecoregions of the Bolivian Amazon: a Geographical Framework for the Functioning of River Ecosystems <i>by Jean-Gabriel Wasson, Soraya Barrera, Bénédicte Barrère, David Binet, David Collomb, Ismael Gonzales, Franck Gourdin, Jean-Loup Guyot & Giovanna Rocabado</i>	69
Conceptual framework	71
Methodology	72
The hydro-ecoregions of the Bolivian Amazon basin	74
Geoclimatic domains	74
Hydro-ecoregions level 1	76
Andes	76
Llanos and Brazilian shield	76
Hydro-ecoregions level 2	77
Validation: regional characteristics of running water ecosystems	77
Geomorphologic characteristics	78
Andes	79
Lowlands	79
Hydrochemistry	80
Stream ecosystem structures	81
Abiotic structure	83
Biological communities: quantitative metrics	83
Biological communities: qualitative structure	84
Correspondences between hydro-ecoregions and biological structures	84
Discussion and perspectives	86
Ecohydrological questions	86
Does it work?	87
Scientific perspectives	88
Practical interest	89
References	89
CHAPTER 6: Ecohydrology of Riparian Forests in the Orinoco River Basin <i>by Judith Rosales, Conrad Vispo, Nelda Dezzio, Ligia Blanco-Belmonte, Claudia Knab-Vispo, Nirson Gonzalez, Félix Daza, Chris Bradley, David Gilvear, Gladys Escalante, Noemí Chacón & Geoffrey Petts</i>	93
Ecohydrological interactions in the Caura River flood plain	95
Aquatic invertebrates and fish communities of the lower Caura River	98
Ecohydrological interactions in the confluence zone of the Mapire River	101

Organic litter decomposition in the Mapire vs the Caura	104
Conclusions	108
References	108
CHAPTER 7: Benthic Macroinvertebrates and Physical Habitat Relationships in the Parana River Flood-plain System	
<i>by Mercedes Marchese, Inés Ezcurra de Drago & Edmundo C. Drago</i>	111
Geographical setting	112
Geomorphology and bed sediments	113
Hydrology	115
Flood-plain lakes	117
Structure and distribution of benthic macroinvertebrates	118
Benthic environments in the main river channels	118
Lateral and temporal dimensions	121
Flood-plain drainage system	121
Functional feeding groups	126
Conclusions	127
References	130
CHAPTER 8: Hydrological Controls of Ecological Structure and Function in the Pantanal Wetland (Brazil)	
<i>by Stephen K. Hamilton</i>	133
Geomorphology and hydrology	133
Water quality	140
Plant life	142
Aquatic invertebrates	144
Fish and fisheries	144
Other vertebrate fauna	146
Hydrological controls on ecological structure and function	147
Environmental problems resulting from hydrological alterations	148
Conclusions	152
References	153
CHAPTER 9: Hydrology and Water Quality in the Piracicaba River Basin, São Paulo State, Brazil	
<i>by Luiz A. Martinelli, Reynaldo L. Victoria, Epaminondas S. Ferraz, Plinio B. Camargo, Marcelo Z. Moreira, Alex V. Krusche, Jorge M. de Moraes, Maria V. Ballester, Lucienne L. S. Lara, Marcelo C. Bernardes, Jean Pierre H. B. Ometto & Carlos Eduardo Cerri</i>	159
The Piracicaba River basin	160
Geographical location	160
Soils	160
Demographic information	161
Historical changes in land use	164
Sources of pollution	164
Hydrology of the Piracicaba River basin	164
Precipitation distribution: spatial and seasonal variation	164
Discharge distribution: spatial and temporal trends	165

Water use in the basin: problems for the future	165
River biogeochemistry and changes caused by human impacts	165
Suspended solids (SS) distribution	166
Major ions	166
Carbon and nitrogen	167
Biogenic gases	171
Rainfall composition in the Piracicaba River basin	173
Conclusions	176
References	176
CHAPTER 10: The Ecohydrology of the Paraíba do Sul River, Southeast Brazil	
<i>by Carlos Eduardo Veiga de Carvalho & João Paulo Machado Torres</i>	179
Historical occupation of the Paraíba do Sul drainage basin	179
The Paraíba do Sul River basin	180
Hydrology and particulate matter mass balance	181
Nutrient and physico-chemical parameter dynamics	183
Heavy metal dynamics	186
Heavy metal contamination in sediments	186
Organic micropollutants in sediments of the middle Paraíba do Sul River	187
Biodiversity	188
Conclusions	188
References	189
CHAPTER 11: The Application of Ecohydrological Principles for Better Water Resources Management in South America	
<i>by Michael E. McClain</i>	193
South American drainage systems and water resources	194
The current quality of South America's surface waters	197
Organic wastes	197
Pathogens	198
Nutrients	198
Sediments	199
Metals	199
Mercury	200
Natural attenuation in river and wetland systems	201
Processes reducing organic matter and nutrient levels	201
Processes reducing sediment loads in rivers	202
Processes neutralizing acids and stripping metals from river systems	203
Integrating ecohydrological principles into management plans	204
Concluding remarks	206
References	206
